Special Issue

Water Contestations: Socio-Technical Entanglements, Politics and Social Mobilisation

Message from the Guest Editors

Water is intrinsically contested and therefore political, meaning that it is part and parcel of arrangements of power and authority in human-water-technology associations and the activities and conflicts that take place within these socio-material arrangements. Based on this notion, this Special Issue will advance our understanding of water contestations and how they unfold through intricate socio-technical, socio-material and symbolic relations. All the papers in this Issue seek to study how socio-political processes and/or culturalsymbolic dimensions connect with physical-material expressions in everyday contestation over water. These contestations often involve disputes over water's material distribution, its socio-normative and cultural organization, its political and technological control, its ontological definition, and over the worldviews that explain and legitimize the ways in which water and waterworlds are to be known and ordered.[...] For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief
