

Special Issue

Heavy Metals in Waters and Sediments

Message from the Guest Editor

This Special Issue aims to explore the source of heavy metals and radionuclides and their migration, transport and transformation in sediment/soil and water. In addition, we are interested in the positive and negative impacts of newly developed methods of investigation of the influence of pollutants on the environment.

Keywords

- heavy metal/radionuclide contamination in sediments and water
- potential sources and impacts of pollutants
- speciation
- migration
- transport
- transformation

Guest Editor

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief
