Wastewater Bio-Ecological Treatment

Message from the Guest Editor

The bio-ecological treatment technologies of sewage are more and more widely used in the world. In recent years, researchers can simultaneously purify gas or realize energy recovery while purifying sewage, which has attracted more and more attention. Also, the migration and transformation of emerging pollutants are deeply studied in the process of wastewater bio-ecological treatment. This topic will collect the latest research findings of researchers in this field, in order to point out the directions for new researches and provide technical parameters for engineering application.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
