

Special Issue

Blue Carbon and Nutrient Dynamics in Coastal Wetlands

Message from the Guest Editor

Maintaining global biodiversity is essential for guaranteeing human well-being and planet sustainability. Coastal ecosystems can play a critical role to ensure resilience along coasts, avoiding erosion, protecting from sea level rise, and ensuring a sustainable habitat for coastal species. Furthermore, coastal wetlands can help to mitigate climate changes by sequestering and storing carbon. Despite their known benefits, these blue carbon ecosystems are significantly threatened, and several hectares have been destroyed during the last decades [...] For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/Carbon_NutrientCoastal

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
