

Special Issue

Environmental Chemistry of Water Quality Monitoring II

Message from the Guest Editor

The world's water supply is a precious commodity that circulates in a continuous cycle of use, abuse, and reuse—we all live downstream. Chemical water quality monitoring data lead to assessments and management of this valuable resource. For this Special Issue in *Water*, manuscripts (research, reviews, short communications) are solicited that describe data-gathering by sampling and analyses of chemical constituents in all types of environmental water bodies over time and space, whether impacted by natural or anthropogenic sources. Beyond merely reporting monitoring data, manuscripts are expected to interpret results of water quality monitoring studies within the context of environmental chemistry principles by evaluating such issues as chemical character, sources and sinks, fate and transport, or other potential impacts of chemicals on our water supply. About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR

Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
