Conservation and Research of Aquatic Endangered Plants

Message from the Guest Editor

Aquatic ecosystems are impacted by multiple stressors, from human and agricultural land uses to climate change, which affects ecological and chemical status, water quantity, and ecosystem functions. Understanding how stressors interfere with and understanding their impact upon ecological status is essential for documenting relative “endangerment” status for plant species and for developing effective conservation plans. This is particularly important for aquatic organisms, which are especially vulnerable to human-induced environmental degradation of natural environments and are experiencing rapid global decline[...] For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/Conservation_Aquatic

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
