

Special Issue

Urban Water Management: A Pragmatic Approach

Message from the Guest Editors

The extremely diverse topics of ECWS-4 range from natural water resources management to water treatments, from high-tech pipe systems to storm and combined sewers, and all refer to the theme of urban hydraulics and hydrology. This Special Issue constitutes a tremendous chance to contribute to a comprehensive (and quite concise) textbook. In fact, the urgent need to refine reliable and sustainable tools for the management of the natural resources in the present scenario dominated by climate change is apparent to all. Moreover, the growing prestige of *Water* guarantees very fast circulation of the selected papers in the scientific and technical community.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR
