Emerging Contaminants (ECs) in Water

Message from the Guest Editor

Emerging contaminants—or contaminants of emerging concern as some researchers prefer to say—include a wide variety of chemicals of different origin (agricultural, industrial, urban) that have been found in the aquatic environment and have raised concerns among scientists, regulators, and the society in general, due to the potential negative effects that their presence in the water cycle can have on the environment and human health. Chemical substances falling under this category include pesticides, flame retardants, detergents, plasticizers, anticorrosives, microplastics, nanomaterials, pharmaceuticals (antibiotics, psychiatric drugs, chemotherapy agents, analgesics, lipid regulators, etc.), illicit drugs, personal care products, artificial sweeteners, estrogens, endocrine disrupting compounds in general, disinfection byproducts, and transformation products of the above, among others. [...]

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
