

Special Issue

Vulnerability and Conservation of Freshwater Biodiversity

Message from the Guest Editors

Freshwater ecosystems—rivers, streams, lakes, ponds, and wetlands—are simultaneously hotspots of biodiversity and endangerment. Acknowledging these important and hot research topics, in this Special Issue we propose to improve knowledge to assess the vulnerability and optimize protection of aquatic systems from biodiversity loss. Studies focused on aquatic flora and fauna with special emphasis on the functional component of biodiversity, habitat connectivity, invasive species, and global changes are especially welcome. For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief
