Emerging Organic Contaminants in Aquatic Systems: A Focus on the Source–Pathway–Receptor–Impact–Mitigation Continuum

Message from the Guest Editor

Emerging organic contaminants continue to attract public and research attention due to their potential ecological and human health risks. Therefore, it is critical to understand the dissemination, behavior, fate, and health risks of emerging organic contaminants in aquatic systems. This Special Issue calls for high-quality original articles, reviews, perspectives, and opinions on recent advances on emerging organic contaminants in aquatic systems. Particular attention is paid to studies addressing one or more aspects in the source–pathway–receptor–impact–mitigation continuum.

You are cordially invited to contribute to this Special Issue.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
