

Special Issue

Climate Change and Water Levels in the Great Lakes

Message from the Guest Editor

In this Special Issue, titled “Climate Change and Water Levels in the Great Lakes,” we review, compare, and contrast the various changes and impacts to the Great Lakes, streams, rivers, and associated watersheds. In this special edition, we hope to reflect on the past, assess the present, and predict the future of water changes in the Great Lakes. For more details, please check the [Special Issue website](#).

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
