

# Special Issue

## Hydrology and Public Health

### Message from the Guest Editor

All natural disasters, including hydrological disasters like different types of floods and mass movement (wet), have a multitude of health impacts. Apart from deaths and injuries caused by hydrological disasters, they are also associated with the emergence of different diseases or illnesses during the post-disaster period. The manuscripts included in this Special Issue will emphasize the public health impacts of hydrological disasters in both developed and developing countries. Most of these manuscripts will have policy implications with regards to reducing the health impacts of prospective victims of hydrological disasters.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
