

## Special Issue

# The Effect of Hydrology on Soil Erosion

### Message from the Guest Editors

Soil erosion is one of the most important environmental issues in natural and anthropized lands. Understanding the key parameters and factors of soil erosion will enable the conservation of soil system goods, services, and resources, and will avoid damage outside of fields caused by transported and accumulated sediments and water. The dynamics of erosive processes are changing, with new trends of [...] For further reading, please follow the link to the Special

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
