

Special Issue

Protection and Restoration of Freshwater Ecosystems

Message from the Guest Editor

Problems posed by significant anthropogenic impacts to freshwater environments are high and widespread, but also solutions are being invented and implemented worldwide thanks to strong and ambitious efforts of individual research centres, conservational practitioners, but also many national and international initiatives. We invite you to submit manuscript comprising results of your research and conservational practices that focus on identifying problems and implementing solutions in protecting and restoring various types of freshwater ecosystems on all levels to this special issue, that is aimed to serve as a platform for widening experiences and exchanging ideas in mitigation of negative effects of different threats to freshwater ecosystems, as well as protecting biodiversity harbored within them.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
