Water Resources Management and Policy Development: International Security and Economic Relations

Message from the Guest Editor

As argued March 23rd, World Water Day, we face persistent drought (falling water tables and river flows), commonly unconstrained pollution and wasteful over-consumption, which means that water has become rarely cheap, increasingly unsafe, and, all too often, not readily available. Water scarcity has become a common problem, but so too has flooding and devastating environmental impact from rising tides and crumbling infrastructure—coastal and throughout river systems. International disputes over draw off imbalances and inadequate transborder flows still threaten conflict and raise troubling security concerns, while economic development and prosperity are often hampered by failed water conservation and management, as well as ill-conceived policies. What are the prospects for increased innovation and imagination in management strategies and technology development?

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
