

Special Issue

Research Progress in Ancient and Modern Water Supply and Distribution Systems for Urban, Agricultural and Hydropower Use

Message from the Guest Editor

Articles related to advanced analyses of the modern water supply and distribution systems involved in hydropower and water supply system support are of particular interest to this Special Issue, together with articles related to the history and development of ancient water systems used for urban and agricultural use by ancient societies in Europe, Asia, the Middle East, and South America. This collection of articles together will examine the temporal continuity of millennia of water engineering development, which will be of interest to *Water's* readership.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
