

## Special Issue

# Water and Sediment Quality Assessment

### Message from the Guest Editors

Water is the basis of life, the guarantee of a prosperous life and our future. Access to clean water resources and potable water is decreasing day by day with increasing urban growth, rapid industrial development and climate change. In addition to their reduction, water resources are polluted and negatively affect the environment and indirectly human health. Our water resources are our inheritance and we must safely entrust this heritage to future generations. For this purpose, water resources should be evaluated and monitored together with the sediment at their bottom, and necessary measures should be taken to protect them.

This Special Issue aims to highlight studies and research in water and sediment quality assessment. Manuscripts may be related to water and sediment quality characterization, monitoring studies, and health assessments. Abstracts on various indices and statistical methods for water and sediment quality assessments are also welcome to be submitted. For more details, please find at: [https://www.mdpi.com/journal/water/special\\_issues/K731547FX8](https://www.mdpi.com/journal/water/special_issues/K731547FX8).

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
