

Special Issue

Water Resources and Sustainable Development

Message from the Guest Editors

Water resources are indispensable for human survival, social development and economic growth. However, climatic changes, population growth and excessive economic development will lead to a number of water-related problems in the long-term, affecting the sustainable development of society and economy. Water pollution, water scarcity and many other water-related problems have emerged in nearly every corner of the world, which has attracted considerable attention from the public and professionals. Facing these problems, many nations and researchers have already taken action to protect water quality and quantity and mitigate the water crisis caused by climate change and human activities. This Special Issue “Water Resources and Sustainable Development” will provide a platform for researchers and policy makers to share their latest thoughts and new findings on this topic, as well as new methods to deal with water-resource problems [...] For further reading, please follow the link to the special issue website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
