

Special Issue

Removal of Aqueous Emerging Contaminants through Photodegradation and (Photo)catalysis

Message from the Guest Editors

Quality of water is an importance attribute in the water industry. Contaminants with known or unknown health effects, once produced, will find their ways to enter aquatic environments. Their occurrence, fates and behaviors in water environments, and potential impacts have been receiving considerable attention from researchers, practitioners and regulators worldwide. Nonetheless, sustainable control strategies for contaminants in water and wastewater still remain a challenge in today's water industry. Nowadays, most of the treatment technologies in water and wastewater field require considerable energy and chemicals to remove the emerging contaminants. Greener approaches such as photolysis or (photo)catalysis, which make use of various light sources and catalysts for decomposition or degradation of emerging contaminants (including inorganic, organic and microbial contaminants) are gaining more and more attentions[...]. About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
