Effects of Marine Pollution on Fish Ecology

Message from the Guest Editor

Marine pollution occurs when a large amount of chemicals; particles; industrial, agricultural, and residential waste; or noise enters the ocean. Marine pollution can also result from activities related to navigation, fishery, aquaculture, oil and gas extraction, and other economic activities related to the sea. Pollution is already known to have a detrimental effect on fish species and the ecosystems where they live. The scientific literature reports many classic cases of the accumulation of pollutants such as heavy metals and synthetic molecules in fish, and their associated negative effects. Similarly, the mechanisms of accumulation and biomagnification through the trophic web have been described. The effect of other pollutants has been elaborated and is still very interesting[...] For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/Marine_Ecology

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
