Special Issue

Microplastics and Nanoplastics in Continental Waters

Message from the Guest Editors

Since the beginning of the plastic industry in the 1950s, a civilization of plastics has emerged due to their presence in all economic sectors and in our daily life. From their production to their end-of-life, their quantities in continental waters—as microplastics or nanoplastics—are significant and alarming. Their impacts on the quality of our water and on biota have to be investigated by considering a large number of research questions and scientific domains. This Special Issue targets researchers working on the detection, characterization, fate, and impact of both microplastics and nanoplastics in continental waters.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
