

## Special Issue

# Impact of Natural Hazards on Forest Ecosystems and Their Surrounding Landscape under Climate Change

### Message from the Guest Editors

An increase in the extremity of climate conditions up to the end of this century is assumed. This will be manifested by a higher frequency of torrential rains, flash floods, landslides, drought episodes, forest and wildfires, wind and snow calamities as well as pest and pathogen outbreaks in forest landscapes.

Therefore, the priority of the proposed Special Issue is to:

- Present contemporary advances in forest and landscape research dealing with abovementioned in addition to any other relevant natural hazards linked to water balances and their variation in the climate of the future.
- Welcome research papers dealing with ecological and socioeconomic impact assessment of natural hazards in forest landscapes.
- Open to researchers focusing on technological or policy solutions relevant to the mentioned problems.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
