

Special Issue

Ocean Wave Studies for Engineering Applications

Message from the Guest Editors

This Special Issue (SI) focuses on oceanic and coastal engineering research with a clear and direct impact on the engineering field. This SI is open to all studies related to offshore, port and coastal engineering, such as—but not limited to—breakwater design and upgrade, coastal morphodynamics, coastal protection, environmental monitoring of the coast and of the ocean, ocean energy harvesting devices. You are invited to submit theoretical and experimental research papers that aim to verify, extend, and innovate the current design practices and the state of the art on topics of practical interest for the engineering community, providing improved lumped formulas that fill existing gaps, extended design charts, as well as new or improved methods. We encourage the use of example applications. Case studies and review papers pointing out the lessons learned, i.e., what may be recommended as a model and what may be improved, are also welcome. For further reading, please follow the link to the Special

Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
