

Special Issue

Removal of PFAS from Water

Message from the Guest Editor

This [Special Issue](#) titled “Removal of PFAS from Water” aims to present the latest technologies for the efficient removal of conventional and emerging PFAS from either wastewater or drinking water, to help to achieve risk management/control and sustainable development goals. Contributions may focus on, but are not limited to, the following topics:

- Removal of individual or mixed PFAS;
- Removal of PFAS from industrial wastewater;
- Removal of PFAS from domestic wastewater;
- Removal of PFAS from drinking water;
- Development of novel removal technology;
- Balance between removal efficiency and cost;
- Release of PFAS from treated water.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief
