

## Special Issue

# Pollution in Estuaries and Coastal Marine Waters

### Message from the Guest Editor

Estuaries and coastal areas are of great ecological importance given the set of high-value ecosystems they encompass. These spaces have been subjected, in the last few decades, to a process of accelerated economic and demographic growth and actions without planning, which have led to the appearance of environmental problems. The installation of industrial sites in coastal areas has had a notable environmental impact due to their high levels of pollution. On the other hand, the tourism boom has led to a process of urbanization of coastal areas with very diverse impacts, such as alterations in the dynamics of the coastline, the transformation of landscapes, and the discharge of untreated or insufficiently treated urban wastewater. [...]

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
