

## Special Issue

# Pollution in Industrial Wastewaters: Novel Approaches and Quantification of the Impacts

### Message from the Guest Editors

Industrial wastewaters are the most critical types of wastewater in term of pollutant content. This Special Issue aims to collect up-to-date papers that explore novel approaches for detecting and tackling pollution in industrial wastewaters and for quantifying the impacts on the ecosystems. Both research papers and review articles are welcome. Moreover, short communications of preliminary but significant results and case studies (e.g., optimization of wastewater treatment plant (WWTP) processes) will be taken into consideration. [...]

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
