

Special Issue

Water Sustainability and High-Quality Economic Development

Message from the Guest Editors

This Special Issue concerns works addressing the link between water, the environment, and the social economy. We invite contributions that address these challenges or others in water sustainability and high-quality economic development considering quantitative and qualitative dimensions of the water environment carrying capacity, as well as those with a multidisciplinary approach. Keywords

- water sustainability
- water–environment–economy nexus
- water environmental carrying capacity
- coordinated development

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
