Special Issue

Recent Advances in Remote Sensing for Wetland and Inland Water Sources

Message from the Guest Editors

Topics of interest include but are not limited to:

- Recent trends of remote sensing applications for wetland and inland water resource management
- Remote sensing applications for enhancing the resilience of wetlands
- Remote sensing for long-term wetland identification and habitat classification
- Advances in remote sensing for capturing appropriate wetland vegetation parameters
- Advances in satellite remote sensing for water resource management
- Remote sensing applications for wetland conservation and management
- Frontiers in remote sensing for water eutrophication and the analysis of driving forces
- Remote sensing for capturing accurate wetland vegetation parameters
- Innovations in remote sensing for biogeochemical parameters analysis of inland water resources
- Remote sensing for aquatic vegetation mapping and monitoring
- Remote sensing for water boundary and dynamics analysis

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
