

# Special Issue

## Research on River, Coastal and Estuarine Morphodynamics

### Message from the Guest Editors

The objective of this Special Issue is to expand our current understanding of river, coastal and estuarine morphodynamics, especially in areas subject to substantial scientific challenges. In particular, submissions of articles on the relationships between climate change and anthropogenic impacts on river, coastal and estuarine morphodynamics are encouraged. These include advancing our understanding of extreme events regarding rivers and coasts, as well as forecasting the morphodynamic evolution on scales relevant to planning and management.

Therefore, we invite you to submit articles with respect to the above and/or the following topics:

- Coastal and estuarine changes under extreme conditions;
- Novel techniques in coastal monitoring and modeling;
- Long-term morphodynamic evolution of river and coastal systems;
- Remote sensing of river and coastal systems;
- Sediment budgets in river and coastal systems;
- Human interactions with coasts;
- Application of morphodynamics models in the field.

---

### Guest Editors

Prof. Dr. Zhi-jun Dai

State Key Laboratory of Estuarine and Coastal Research, East China Normal University, Dongchuan Road 500, Shanghai 200241, China

Dr. Jie Wang

State Key Laboratory of Climate Resilience for Coastal Cities, Department of Civil and Environmental Engineering, The Hong Kong Polytechnic University, Hong Kong, China

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
