SARS-CoV-2 in Waters: Rational

Message from the Guest Editor

During the current outbreak of COVID-19, the authorities and the public have raised numerous questions related to the risk of fecal–oral transmission and the eventual necessary prevention measures. Some recent papers have described the presence of SARS-CoV-2 in fecal samples of both symptomatic and asymptomatic patients, as well as in urban wastewater and surfaces, using PCR detection methods and sometimes by cell culture, the only methodology that allows confirmation of infectivity. Important questions remain, and many research groups are now working hard to analyze SARS-CoV-2 in diverse water environments using more robust methods for recovering coronaviruses, studying persistence/survival in natural and marine waters used for recreational activities and the efficacy of the classical disinfection treatments[...] For further reading, please follow the link to the Special Issue Website at:https://www.mdpi.com/journal/water/special_issues/SARS_Waters

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
