

## Special Issue

# Fate and Transport of Contaminants in Soil and Water

### Message from the Guest Editors

Contaminants from natural events and anthropogenic activities are changing the conditions of both soil and water, which has a strong impact on the environmental functions of soil and water and threatens human health and environmental safety. With this Special Issue of *Water*, we offer a platform for the publication of innovative original articles and reviews regarding the fate and transport of contaminants in soil and water. The scope of this Special Issue includes, but is not limited to, the following: (1) the identification and source tracing of contaminants (especially emerging contaminants) in soil and water; (2) determination of the distributions, pathways, and destinations of contaminants in soil and water; (3) investigation of the transport and fate of contaminants in soil and water using modelling methods; (4) development of highly efficient, low-cost, and environmentally friendly technologies for contaminants in soil and water.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
