

## Special Issue

# Socioeconomic Indicators for Sustainable Water Management

### Message from the Guest Editors

Water resource management needs the development and application of indicators to monitor progress towards and trends for water sustainability in a full range of uses (domestics, agriculture, industry, and ecological) at spatial scales (farm, urban, basin, etc.). Moreover, water management has been increasingly challenged due to uncertainties resulting from climate change. The information that these indicators should provide become more relevant for policy makers and practitioners in order to inform decisions aimed at the use of water in a sustainable way. Then, the adaptation of water resource management to global changes (including also the increment in demand) is one of the main futures that challenge socioeconomic systems. This Special Issue aims to improve knowledge on the use of socioeconomic indicators for sustainable water management. Expanding research and innovation around this issue is necessary to promote the transition to sustainable use, management, and improvements in the social welfare of water. Both applied and methodological research papers are welcome, trying to create a set of studies that reflect the variety of existing approaches in this subject.

### Guest Editors

Prof. Dr. José M. Martínez-Paz

Department of Applied Economics, Faculty of Economics and Business,  
University of Murcia, 30100 Murcia, Spain

Dr. Francisco Alcon

Agricultural Economis, Universidad Politécnica de Cartagena, Spain

### Deadline for manuscript submissions

closed (31 March 2020)

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
