

Special Issue

Use of Biomaterials to Control Suspended Solids for Surface Water Treatment

Message from the Guest Editor

This special issue welcomes the scientific contribution that will improve knowledge in research on the use of biomaterials to control suspended solids for surface water treatment. Specifically, submissions may address one of the following issues:

- Recent advances in treatment of suspended particles in water;
- Biomaterials for environmental applications;
- Effects of suspended particles in water;
- Optimization mechanisms of coagulation–flocculation processes in water;
- Mechanistic understanding of suspended particles in water.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
