

## Special Issue

# Innovative Approaches to Freshwater Restoration and Management

### Message from the Guest Editor

We kindly invite you to submit scientific manuscripts related to the management and restoration of water bodies. The aim of this Special Issue is to present innovative methods used to protect water quality and ways to restore heavily eutrophicated freshwaters. Authors may submit manuscripts concerning research related to the introduction of protective measures in catchment areas to reduce the external load of nutrients for the prevention of further eutrophication, and restoration methods to improve the water quality. Submitted manuscripts should include both a detailed description of the method used and its effects, possibly in the long term. We invite you to submit interdisciplinary papers assessing the effects of different management practices on the eutrophication challenge.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
