Aquatic Plant Ecology: Biodiversity and Ecological Processes

Message from the Guest Editors

"If we don't know what we have, we will not know what we loss". That is the true reason for biodiversity research, and is very important for all the research fields regarding the natural ecosystem. Aquatic ecosystems play an important role in sustaining the Earth's biological diversity. They are an essential reservoir and share an enormous proportion of Earth's biological productivity. Although it is an important foundation of the ecological process and environmental restoration research, for a long time, the plant biodiversity of aquatic ecosystems has not drawn great attention from scientific research. Aquatic biodiversity in both freshwater and marine environments is undergoing a continuous decline because of the overexploitation of species, pollution from cities, industries, and agriculture, biological invasion, loss of and changes in ecological niches, and the need for protection. [...]

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
