

Special Issue

Research on Warning Models for Landslide and Debris Flow

Message from the Guest Editor

The purpose of this Special Issue of *Water* is focused on, but is not limited to, the effects of climate change on warning models for landslides and channelized debris flows by different rainfall characteristics. The Special Issue could improve the current literatures of warning models by considering the trend of climate change on the impacts of warnings for different types of landslides.

- landslide
- debris flow
- rainfall threshold
- warning model
- climate change

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
