

Special Issue

Water Security and Health

Message from the Guest Editors

Water security is the management of complex and interrelated water risks. Within our water systems, one user's choices can impact the water security and health of many others, such as through abstraction, pollution or storage of water. These impacts can be exacerbated by climate variability and change. Managing water security requires awareness of these varied human health impacts, which may range from diarrhoeal and mosquito-borne diseases, to psychosocial impacts, muscular-skeletal, and impacts on child development, such as stunting and cognitive impairment. This Special Issue focuses on "Water Security and Health" and welcomes contributions that address the different interactions between water security and health, which help us to understand the positive and negative impact water management can have on human health and how we can manage water for better health outcomes.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
