

## Special Issue

# Innovative Membrane Processes in Low-Carbon Wastewater Treatment

### Message from the Guest Editors

Low-carbon wastewater treatment shows great potential in achieving carbon neutrality and energy-efficient wastewater management in light of sustainable development principles. Membrane processes can be adopted for wastewater treatment, including low-pressure ones (ultrafiltration and microfiltration), high-pressure ones (nanofiltration and reverse osmosis), and the ones driven by osmosis pressure and thermal energy. This Special Issue on “Innovative Membrane Processes in Low-Carbon Wastewater Treatment” of MDPI’s *Water* journal aims to highlight the recent developments within membrane processes in low-carbon and sustainable wastewater treatment and to discuss the challenges and opportunities for the future development. [...]

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
