

Special Issue

Latest Advances in Urban Water Treatment and Management

Message from the Guest Editor

The last few decades have seen many changes in urban water treatment and management due to the implementation of new planning regulations and practices targeting low impact development and other environmentally focussed policies and practices. These include the introduction of innovative and sustainable new stormwater and wastewater treatment technologies and practices and changing community practices, attitudes and expectations with regard to sustainable urban development. This Special Edition, entitled “Latest Advances in Urban Water Treatment and Management”, aims to highlight research on improvements in urban water and stormwater management practices and technologies that have led to enhanced treatment efficiencies and reduced stormwater and environmental pollution. This can include research studies on the effects of new policies, urban water management practices, wastewater and stormwater treatment devices, advances in computer modelling and other relevant topics. About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief
