

Special Issue

Sustainable Development of Water, Energy and Environment Systems

Message from the Guest Editor

Ever since 2002, when the first Conference on Sustainable Development of Energy, Water and Environment Systems (SDEWES) was held in Dubrovnik, the SDEWES Conference series has been providing a worldwide forum for scientists and those interested in sustainability to share the state of the art, future directions, and priorities in this field. SDEWES is dedicated to the advancement and dissemination of knowledge on methods, policies, and technologies for increasing the sustainability of development by decoupling growth from the use of natural resources and by transitioning to a knowledge-based economy. SDEWES has maintained high publishing standards, with more than 2500 research articles published in leading journals. MDPI's *Water* journal is pleased to support SDEWES by launching a Special Issue dedicated to the 2024 19th SDEWES Conference. This Special Issue seeks to provide an opportunity for researchers in a wide range of areas to originate, discuss, share, and disseminate new ideas. *Water* also offers a perfect platform for the interdisciplinary and multi-cultural evaluation of complex systems.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
