

Special Issue

Water Pollutants and Human Health: Challenges and Perspectives

Message from the Guest Editors

This Special Issue of *Water* aims to focus on the detection and potential impact of some of the pollutants and contaminants missed by current indicators of water quality. We aim to gather submissions of scientific statements focused on endotoxin and health, fungal contaminants, sand and bathing water, antimicrobial resistance genes, and antibiotics, including their metabolites, micro-plastics, and emerging pathogens associated with climate change (e.g., *Vibrio* spp and *Candida auris*).

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
