

Special Issue

Advances in Water and Wastewater Monitoring and Treatment Technology

Message from the Guest Editors

Water contamination, water treatment and water resource management are topics of great interest nowadays, due to the adverse effects that contaminated water produce with respect to the environment and human health; and sanitary problems as a result of insufficient clean portable water. Furthermore, it is essential to increase knowledge regarding the monitoring and control of water quality due to the presence of different priorities and emerging contaminants and to develop innovative water and wastewater treatment technologies. As a consequence, we will focus this Special Issue on the current stage of technologies to monitor, control and remove pollutants in water and wastewater.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief
