

Special Issue

The Impact of Climate Change and Anthropogenic Activities on Water Resources and Hydrology

Message from the Guest Editors

This Special Issue aims to discuss the impact of climate change and anthropogenic activities on water resources and hydrology, including but not limited to: changes in hydrology and water resources at a regional or global scale, the response of the hydrological cycle to climate change, impacts of land use, irrigation, reservoir, and other anthropogenic activities on water resources, hydrological modeling under changing environment, future water resources projection with GCMs and hydrological models, etc[...] For further reading, please follow the link to the Special

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
