

## Special Issue

# Freshwater Ecosystems under Anthropogenic Stress

### Message from the Guest Editors

The present Special Issue will focus on the dynamics of contaminants in the freshwater ecosystem (water, sediments, and biosphere). Authors can submit work related to toxic elements, organometals, metalloids, radionuclides, and emerging contaminants such as microplastics, pharmaceuticals, pesticides, flame-retardants, personal care products, etc. We encourage the submission of environmental fate studies including biodegradation, bioaccumulation and deposition, transport, adsorption/desorption processes, and development of novel environmental analytical methods, including case studies.

---

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
