

Special Issue

Climate, Water, and Soil

Message from the Guest Editors

This Special Issue “Climate Water and Soil” in the Water journal aims to discuss, identify, and address the potential problems arising from climate variability and/or change in water and soil resources. Research and review manuscripts dealing with climate monitoring and future climatic changes and interactions of climate with resources (water and soil), hydrological cycles, and the critical biochemical cycles of carbon and nitrogen are very welcome. Additionally, links between climate and natural and agricultural (crops) ecosystem productivity, resources’ quality, soil and water resource management, adaptation measures in the agricultural sector, water management to mitigate water scarcity, and water use efficiency issues are welcome. In this Special Issue, the goal is for authors to respond to developing solid research on climate, water, and soil in a context that is sometimes missing in mainstream literature on climate. [...] For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/climate_soil

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
