Coastal Hazards Management

Message from the Guest Editor

Just a few months ago, Ehud Galili from the University of Haifa published a description of the Tel Hriez sea-wall, a 7000-year-old structure built to protect a settlement along the coast of what is now Israel. The paper was striking for a variety of reasons. First, it brought to mind the adage that “the ocean giveth, and the ocean taketh away”; human history and human settlement are bound to the ocean, yet the Tel Hriez sea-wall is another reminder that the ocean is not, and has never been, an easy neighbor. Next, the Tel Hriez sea-wall was built in an era in which sea level was rising and now sits at a depth of approximately 3 meters, serving as another striking reminder that managing hazards such as flooding and erosion in our era of climate change will surely be a challenge marked by some failure. [...] For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
