

## Special Issue

# Sediment Transport in Coastal Waters 2.0

### Message from the Guest Editors

We are pleased to invite scientists working on various aspects of sediment transport, in muddy, sandy or mixed environments, to share their most recent results and give reviews or examples encompassing different aspects of sediment transport in coastal zones at different scales. Papers may deal with water and sediment analysis (including new methods, new devices) based on experimental studies, numerical modeling, field observation, remote sensing or a combination of several methods.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
