Global Perspectives on Flood Risk Communication in a Context of Climate Change

Message from the Guest Editor

Around the globe, humans are becoming more dependent but also more threatened by water. A considerable and increasing proportion of the world's population lives in places close to rivers and coastal areas. Changes in local and global climatic patterns – stemming from climate change and global sea-level rise, but also more regional phenomena like El Niño–Southern Oscillation – are also increasing the incidence of extreme weather events and may result in more frequent flood episodes from precipitation, rivers, and seawater. Given the tension that results from urbanization and more intensive use of land at flood-prone locations, there is a need for a better understanding of how to communicate these risks to vulnerable populations. This Special Issue will be dedicated to research on responsible and inclusive ways of risk communication about flood risks, [...] For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
