

## Special Issue

# Flow and Chemical/Heat Transport in Fractured Rocks and Karst Formations

### Message from the Guest Editors

The objective of the [Special Issue](#) is to state recent advances in flow and transport in heterogeneous formations that include, but are not limited to, chemical/heat transport with the anomalous flow, validity and capacity of current models and theory under anomalous flow and transport in heterogeneous formations, and geological formation construction technique of fracture networks and karst formations. We invite authors to contribute original research and review articles on innovative numerical, laboratory, and field studies for flow and chemical/heat transport in fractured rocks and karst formations. Contributions on anomalous flow and reactive transport behaviors at different scales are of great value.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
