

## Special Issue

# The Geochemical Behavior of Trace Elements in Inshore Environments

### Message from the Guest Editors

The geochemical cycles of trace elements in inshore environments, especially in estuarine and coastal waters, have been significantly modified by anthropogenic influences as a result of the rapid industrialization, population growth, urbanization and resource demand that have occurred worldwide over the last 100 years. How trace element chemistry may change in the future as a direct (pollution) and indirect (global warming, ocean acidification) result of human activities can only be predicted if we better understand the geochemical behavior of biologically active minor and trace elements in the inshore environment. In this Special Issue, we would like to focus on the study of the geochemical behavior of trace elements that are critically important for marine organisms, either by helping to promote life or by producing harmful compound, in the context of different inshore environments. In addition, the study of the distribution of organic pollutants, such as persistent organic pollutants (POP) and pharmaceutically active compounds (PhACs) in inshore environments is also welcome in this Special Issue.

### Guest Editors

Prof. Dr. Tien-Hsi Fang

Department of Marine Environmental Informatics, National Taiwan Ocean University, Keelun, Taiwan

Dr. François L. L. Muller

Department of Oceanography, National Sun Yat-sen University, Kaohsiung 80424, Taiwan

### Deadline for manuscript submissions

closed (31 July 2022)

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
